

## **MICROWAVE MEASUREMENTS of DIELECTRIC MATERIALS at VARYING TEMPERATURES**

J. Mazierska, M. Jacob, K. Leong D. Ledenyov  
James Cook University

While designing communications filters we need to know accurately microwave properties of dielectrics used. At James Cook University we developed a system for accurate measurements of  $\epsilon_r$  and  $\tan\delta$  of low loss dielectrics using the Hakki-Coleman and Split post resonators in temperature range down to 25 K.
